

# Botox

Dr. Radeka is happy to offer to her patients a way to improve the appearance of fine lines and wrinkles associated with the natural process of aging.

Botox is used medically to treat certain muscular conditions, and cosmetically to remove wrinkles by temporarily paralyzing muscles. It is made from a neurotoxin called botulinum toxin that is produced by the bacterium *Clostridium botulinum*.

Although Botox is a powerful poison, when used correctly, it has a number of applications.

Botox is the most popular non-surgical cosmetic treatment, with more than 6 million Botox treatments administered each year.

Botox is a neurotoxin derived from *Clostridium botulinum*, an organism found in the natural environment where it is largely inactive and non-toxic. Botulinum toxin is used to reduce fine lines and wrinkles by paralyzing the underlying muscles.

People also use Botox to treat excessive sweating, migraines, muscular disorders, some bladder and bowel disorders and many more disorders.

To see if Botox is right for you, please call Dr. Radeka to schedule a complimentary consultation.
