

Kybella or Phosphatidylcholine/Sodium Deoxycholate

Dr. Radeka is happy to offer to her patients a revolutionary new way to improve the appearance of moderate to severe fullness associated with submental fat, also called “double chin,” in adults.

Kybella or Compounded Phosphatidylcholine/Sodium Deoxycholate (PC/DC) is injected into the fat under the chin. The injection contains a naturally occurring substance in the body, deoxycholic acid, which helps the body absorb fat cells. When properly injected, Kybella or Compounded Phosphatidylcholine/Sodium Deoxycholate (PC/DC) destroys fat cells. The FDA approved Kybella or Compounded Phosphatidylcholine/Sodium Deoxycholate (PC/DC) as a treatment for adults with submental fat in 2015. Multiple treatments with injections need to be given at least 1 month apart for maximum effect.

Dr. Radeka, in conjunction with you, the patient, will decide how many treatments are necessary to obtain the look you desire.

To see if KYBELLA or Compounded Phosphatidylcholine/Sodium Deoxycholate (PC/DC) is right for you, please call Dr. Radeka to schedule a complimentary consultation.
